TREE REPLACEMENT PLAN

SHEET
L1.04

All disturbed non-street areas shall be restored with a minimum 4 inches of topsoil, seed and mulch or sod as directed by the Engineer within 72 hours of completion of grading activity in that particular area.

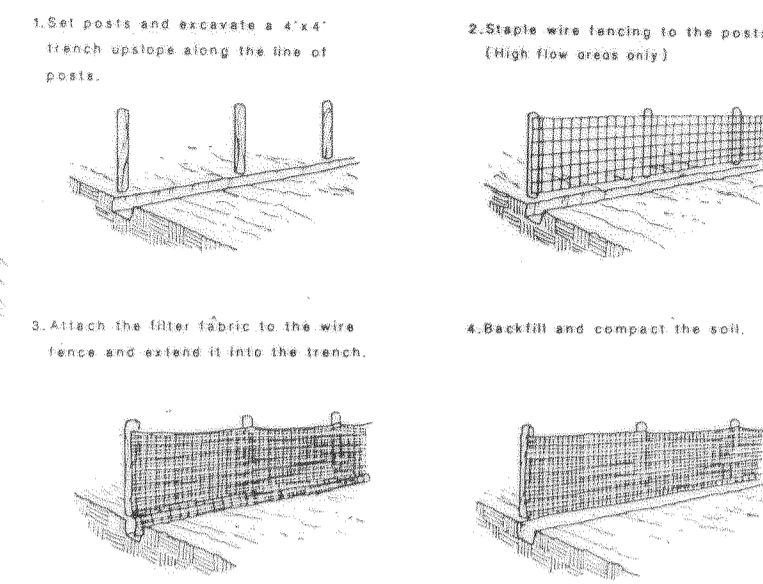

a. All seed, sod, mulch and fertilizer shall conform with the following MnDOT specifications as modified below:

Item	Specification No.
Sod	3878
Seed	3876
Mulch (Type 1, disc anchored)	3882
Fertilizer	3881
General Placement	2575

b. The seed mixture shall consist of a MnDOT Type 500.

NOTE:

CONSTRUCTION OF A SILT FENCE

MAINTENANCE PROGRAM

1.3.1 **Inspection** - Silt fences shall be inspected immediately after each rainfall and at least daily during prolonged rainfall. Any required repairs shall be made immediately.

1.3.2 **Replacement** - Fabric shall be replaced promptly when it decomposes or becomes ineffective before the barrier is no longer necessary.

1.3.3 **Sediment removal** - Sediment deposits should be removed after each storm event. They must be removed when deposits reach approximately one-half the height of the barrier.

Any sediment remaining in place after the silt fence or filter barrier is no longer required shall be dressed to conform with the existing grade, prepared and seeded.

1.3.4 **Removal of silt fence** - Silt fences shall be removed when they have served their useful purpose, but not before the upslope area has been permanently stabilized. If the upslope area is to be exposed longer than 4 months, that area shall be covered with temporary vegetation when first exposed.
